

# Engine Company 2

## Monthly Report

### June, 2021

#### **Summary**

Station 2 personnel completed 8 area surveys in the month of June which was down because of promotional testing. Mulch was delivered to all the firehouses and it makes the grounds look neater by keeping the weeds down. There is quite a bit of foot traffic and it always feels good when we receive compliments on the landscaping. Station 2 personnel responded to 25 calls for service in the month of June.

#### **Personnel**

FF Larry Rossi was at Station 2 for three sets to allow for rotational orientation.

#### **Apparatus/Equipment**

The boat was taken to be used for the Cedar Lake fireworks the last week of June. After being repaired for a hydraulic leak found last month, the Hurst tool was returned and is back in service. The remaining SCBA that was out of service has also been returned. The iPad from Engine 2 was updated but the new operating system is not compatible with the NexResponder software. We have contacted IT on multiple occasions but are still waiting for a response on how to remedy the problem. Tower 2 iPad is being used in the interim.

#### **Fire Stations/Facilities**

A representative was brought to all the city buildings by public works to perform boiler inspections. There were no issues found with the boilers at Station 2. Metro systems was on site to work on the keyless entry system.

#### **Miscellaneous**

We receive an email stating the budget for fiscal year 21-22 has approved funds for the replacement of the Matthews street ramp and an air condition system to replace the inefficient window units now in use. No word yet on a start time for either project.

Respectfully submitted,  
Captain David J. Simard
